Professional Summary

Infrastructure Engineer at Noventiq with hands-on experience in enterprise server maintenance, disaster recovery, and identity systems. Actively transitioning to DevOps, combining strong networking fundamentals with practical skills in AWS, Docker containerization, and Python-based automation. Passionate about building resilient microservices, implementing observability pipelines, and optimizing system reliability.

Technical Skills

DevOps & Observability: Docker, Docker Compose, Prometheus, Grafana, Git, CI/CD (GitHub Actions)
Cloud & AWS: EC2, S3, CloudFront, IAM, VPC (Subnets/Route Tables), Security Groups, Route 53
Linux Utilities: grep, sed, awk, systemctl
Operating Systems: Linux (Ubuntu), Windows Server
Programming: Java, Python (Boto3, Flask), JavaScript (Node.js), Bash/Shell Scripting
Networking Tools: DNS, SMTP, TCP/IP, curl, telnet, nslookup
Infrastructure & Security: Microsoft Exchange Server, Entra Connect, Server Patching, DC-DR Planning

Professional Experience

Noventiq Gurugram, India
Technical Specialist June 2025 – Present

- Infrastructure Health & Maintenance: Manage **Microsoft Exchange Server** and Edge Transport environments supporting **10,000+ enterprise users**; proactively monitor server metrics, service uptime, and DAG replication health to ensure high availability.
- Disaster Recovery & Compliance: Participate in scheduled **DC-DR (Data Center - Disaster Recovery)** drills and infrastructure audits, ensuring strict adherence to **RBI** data security and operational guidelines.
- Security Operations: Execute routine server patching and formulate/enforce data protection policies to safeguard enterprise information against vulnerabilities.
- Identity Management: Administer **Microsoft Entra Connect** for hybrid Active Directory synchronization, troubleshooting SMTP connectors and firewall rules in the DMZ network zone.

Projects

Containerized Observability Stack | Python, Docker Compose, Prometheus, Grafana **GitHub Repo**

- Architected a 3-container microservices stack orchestrating a custom **Python/Flask** metrics producer, **Prometheus** for time-series data scraping, and **Grafana** for real-time visualization.
- Engineered a multi-threaded Python agent to poll system kernel metrics (CPU, Memory, Disk) in real-time and trigger REST API warnings based on configurable anomaly thresholds.
- Implemented container isolation, internal DNS, and port mapping via **Docker Compose** to establish secure communication between the collector and visualization layers.

Cloud Portfolio & Automation | AWS S3, CloudFront, GitHub Actions, Python **Live Link**

- Cloud Architecture: Hosted a personal portfolio on AWS S3 and integrated **Amazon CloudFront (CDN)** to globally distribute content, reduce latency, and enforce secure HTTPS delivery.
- CI/CD Automation: Engineered a **GitHub Actions** pipeline to trigger automated deployments on push, executing a **Python/Boto3** script that syncs local directories to S3 while handling MIME types.

SAFAR (Travel Booking Platform) | Node.js, EJS, Render, MongoDB **Live Link**

- Cloud Deployment: Deployed a dynamic **Node.js/EJS** travel application backend on **Render (PaaS)**, securely managing environment variables and analyzing production build logs for continuous delivery.

Education

Galgotias University Greater Noida, India
B.Tech in Computer Science | *CGPA: 8.5* 2021 – 2025

Certifications

- **Microsoft Certified: Azure Fundamentals (AZ-900)** March 2026
- **AWS Academy Cloud Foundations**
