Professional Summary

Infrastructure engineer who managed four AWS accounts across four regions: production troubleshooting (ECS, CodeBuild, ALB, RDS, CloudFront), RI cost optimization and Python/PowerShell automation. Contributed to SOC 2 / ISO 27001 compliance; previously ran hybrid Exchange/M365 for banks. AZ-104 and AZ-900 certified; targeting DevOps/SRE roles.

Technical Skills

AWS: ECS, ECR, EC2, Lambda, CloudFormation, RDS (PostgreSQL), ElastiCache, OpenSearch, S3, CloudFront, ALB, VPC, Route 53, ACM, WAF, IAM, CloudWatch, EventBridge, SNS, SES, End User Messaging
CI/CD & Containers: CodePipeline, CodeBuild, CodeCommit, CodeArtifact, GitHub Actions, Git, Docker, Docker Compose
Monitoring & Web Servers: CloudWatch Logs Insights & Alarms, Prometheus, Grafana, Nginx, Gunicorn
Scripting & Languages: Python (boto3, Flask), Bash, PowerShell (Microsoft Graph API), JavaScript (Node.js), Java
Security & Compliance: IAM policies & cross-account roles, AWS WAF, SOC 2 / ISO 27001 evidence, patch management
OS, Networking & Databases: Linux (Ubuntu), Windows Server, TCP/IP, DNS, SMTP, curl; PostgreSQL, MongoDB
Microsoft: Azure (AZ-104), Microsoft 365, Exchange Server/Online, Entra Connect
Currently Learning: Terraform (Infrastructure as Code)

Professional Experience

Thoughts2Binary Gurugram, India
Infrastructure Developer Aug 2026 – Oct 2026

- **Audit Automation & Cost Savings:** Proposed and implemented a serverless monthly audit across four AWS accounts and regions: a Python/boto3 audit (configuration, cost, RI coverage/expiry, utilization) on Lambda, scheduled by EventBridge, with reports stored in S3 and emailed via SES. Used its findings to purchase about 30 Reserved Instances.
- **Production Troubleshooting:** Investigated 502 / "connection reset by peer" errors on a production nginx + Gunicorn ECS service: analyzed 790K+ requests in Logs Insights, traced errors to specific upstream services and proposed fixes.
- **CI/CD & Deployments:** Debugged CodeBuild/CodePipeline and Serverless deploy errors (log-group conflicts, stacks stuck in REVIEW_IN_PROGRESS, missing roles); replaced hardcoded keys in buildspecs with service roles in all accounts.
- **IAM & Cross-Account Access:** Executed a cross-account ECR image migration using IAM roles and CodeBuild, troubleshot cross-account CodeArtifact AccessDenied errors, and planned SMS Sender ID sharing via AWS RAM.
- **Networking & Edge:** Troubleshot CloudFront/S3 (OAC) 403 errors, investigated AWS WAF rules that let restricted requests bypass filters, and planned a zero-downtime ALB consolidation using listener rules and weighted target groups.
- **Database & Performance:** Downscaled RDS databases using Blue/Green deployments; traced recurring RDS/ALB alarms to the triggering metric, fixed the cause and set realistic thresholds; evaluated autovacuum vs pg_repack for bloat.
- **Compliance & Maintenance:** Prepared SOC 2 audit evidence and templates as the organization achieved SOC 2 and ISO 27001 compliance; built a security-patch tracker and applied patches to RDS, ElastiCache and OpenSearch.

Noventiq Gurugram, India
Technical Specialist | *Exchange & Microsoft 365 Operations* Jun 2025 – Aug 2026

- **Automation:** Built a two-stage PowerShell + Graph API engine for hybrid Exchange/M365 mailbox provisioning at a public-sector bank (239 mailboxes, 100% accuracy); also scripted naming conventions, shared mailboxes and Litigation Holds; proposed an Azure Automation runbook solution for high-volume mailbox delegation at a second bank.
- **Compliance & Diagnostics Tooling:** Built PowerShell/Graph API reporting for RBI audits (MFA, Conditional Access, inactive users, mailbox auditing) and MFIA, a topology-aware hybrid mail-flow incident analyzer with HTML/SVG reports.
- **Reliability & DR:** Managed Exchange Server and Edge Transport for banking clients, monitoring metrics and DAG replication health for 10,000+ users; participated in DC-DR drills and ran routine patching under RBI guidelines.

Projects

Containerized Observability Stack | Python, Docker Compose, Prometheus, Grafana **GitHub Repo**

- Architected a 3-container stack on **Docker Compose**: a custom **Python**/**Flask** metrics producer with a multi-threaded agent polling CPU/memory/disk and raising REST alerts on thresholds, scraped by **Prometheus** and visualized in **Grafana**.

Cloud Portfolio & CI/CD | AWS S3, CloudFront, GitHub Actions, Python **Live Link**

- Hosted a portfolio on a private **S3** bucket behind **CloudFront** (HTTPS, CDN); a **GitHub Actions** pipeline deploys on every push via a **Python**/**Boto3** sync script that handles MIME types.

Education & Certifications

Galgotias University | B.Tech in Computer Science, CGPA: 8.5 Greater Noida, India | 2021 – 2025

- **Microsoft Certified: Azure Administrator Associate (AZ-104)** Apr 2026 | **Azure Fundamentals (AZ-900)** Mar 2026
- **AWS Academy Cloud Foundations**
